To be able leverage my technical skills and experience in software development to contribute to the design, development, and implementation of cutting-edge software solutions. Seeking a challenging role in a dynamic organization where I can work collaboratively with cross-functional teams to create high-quality software products that meet or exceed client expectations. Committed to staying current with emerging trends and technologies in the field and dedicated to continuous learning and improvement.

Work Experience:

Oklahoma State University, Stillwater, Oklahoma
Full-Stack Web Developer, November 2021 – Present

- Implement new web and console base application to support financial function for the University
- Ensure application security and ability to interact with Microsoft SQL server and Oracle database.
- Enhance existing application platform by repurposing so that it aligns with new functionality using ASP.net, C#
- Add permission feature to an internal web application so that only approve users can access it.
- Designed and developed friendly end user approval financial budget requested application.
- Created a routing process that the submitted request information get sent to the head departments for approval / decline.

McAfee & Taft, OKC, Oklahoma
Information System, June 2015 – November 2021

- Managed ethical wall database for permission right access to the digital files.
- Administrator of our email management system Mimecast, creating policies for attachment and email spoofing.
- Implemented an Emergency Alert System so information will be transmitted to all users in case of a system outage / disaster.
- Handled creating, managing, and disabling end-user accounts through active directory

Dell, OKC, Oklahoma
Sr. Technical Pro Support Associate, Oct 2013 – June 2015

- Provided best practice technical solutions to Small, Medium, Enterprise and Federal client with issues
- Configure client network SMTP to work with client email system.
